My Solar Geysers offer the largest range of **solar geysers** available in **South Africa**. Depending on what the use of your geysers will be, will obviously determine the size and specifications of the geyser you require. Please see the guidelines below, as to which **geyser**

is right for you and the price ranges for each type:

Residential Solar Geysers:

- **Small Residential Geyser:** This would be suitable for a person who lives alone or a small family not needing more than 200 litres of hot water per day. This size solar geyser will cost between R4 000 and R6 000. The rebate on this would be more or less R800.

- **Medium Residential Geyser:** A solar geyser of this size is great for a family of 3 people and would be more than enough to heat water for everyone to run a full bath and do washing etc. The cost of this solar geyser is in the region of R5 000 to R7 500 and a Eskom rebate of more or less R1 200.

- **Large Residential Geyser:** This description geyser fits a family of 5 or 6 and is has plenty of capacity to heat all the water needed for daily life with more than enough hot water to spare. Costs around R11 000 and a rebate of R2 000 to R3 000.

Commercial Solar Geysers:

- **Small Business / Bed & Breakfast type:** You would require a few smaller solar geysers with capacity to heat and reheat water constantly, but not a massive tank size. This type of geyser would obviously need to be rugged enough to withstand the constant reheating of water and would cost more or less R30 000 in total at a rebate back of around R7 000.

- **Medium Business / Larger Hotels:** These type of commercial installations usually require large number of geysers depending on the number of point of use. These geysers are again not massive tanks, but need resilience of repeated boiling daily. Total installation cost estimate of R80 000 - R120 000, rebate being around R30 000 - R40 000)
